Assignment 5

UVM

Required:

U have a **router.v** design and we need to build full UVM verification environment for verifying this design, with report message printed inside every build phase for every component and in new for every object type class, repeat this printing message four times **LOW, MEDIUM, HIGH and FULL** with different verbosity for every build phase and make 4 different runs with different verbosity configuration one with +UVM_VERBOSITY=UVM_LOW and so on with others, U need to deliver the log file for every run showing all components and objects constructed correct and the print messages are printed correct with its verbosity level according to the configured filter level

---

Deliverables:

U have to deliver

- Zip Folder contains:
  - The implemented **.sv** files and the **design files** and **run.do file**.

- **Separated PDF** contains:
  - Snippets for the implemented code for all the UVM files.
  - Snippets for the logs show the all printed messages.
  - Snippet for Do file you have used for automating the process.

The delivered zip file must be named like **your_name_Assignment_5.rar** for example:
Hassan_Khaled_Assignment_5.rar also the PDF file Hassan_Khaled_Assignment_5.pdf

---

Good Luck
